

# NATURAL DIAMOND

## Natural Industrial Diamond Manufacturing.

Shannon Abrasives is one of the last natural industrial diamond product manufacturers, controlling the production process from start to finish. Sourcing board direct from producers we bring it in-house where we crush, shape sort, sieve size and chemically clean and polish the material. We have the ability to tailor make products to our customers' exact requirements.

## Premium

The best shapes and the lightest colours are selected from original mined diamond to be the starting material for our Premium product. Mechanically and chemically processed to improve the initial shape and remove weak stones, the resulting product exhibits the characteristics of strength and uniformity. The regular shape of P quality guarantees an even wear pattern on the stones and thus ensures uniform penetration and maximum life.

### Sizes Available:

**P quality is available in sizes 1 – 100spc**
